About Me

Computer Science student with a strong interest in backend development, web technologies, and system design. Experienced in building REST APIs, database modeling, and full-stack academic projects. Motivated to learn industry best practices and grow as a software engineer.

Education

Instituto Tecnológico de Hermosillo (ITH), Computer Science Engineer- Aug 2021 – Dec 2025
ing – Hermosillo, Sonora, Mexico

Focused on software development, databases, and system analysis.

- Backend development with C# and .NET
- Relational database design with SQL Server
- Software engineering and system analysis projects
- Academic projects involving REST APIs and web applications

Experience

Full-Stack Developer, Gasca Tecnologias – Hermosillo, Sonora, Mexico July 2024 – July 2025

- Designed and implemented REST APIs using ASP.NET Core
- Designed and implemented a React component library using HTML, CSS, and JavaScript for UI design.
- Modeled relational databases using Entity Framework Core
- Applied layered architecture (Controllers, Services, Repositories)
- Worked with authentication, validation, and business rules
- Used Git and GitHub for version control

Intern Developer, GE Aerospace – Hermosillo, Sonora, Mexico July 2025 – Dec 2025

- Designed and implemented REST APIs using ASP.NET Core
- Designed and implemented a React component library using HTML, CSS, and JavaScript for UI design.
- Modeled relational databases using Entity Framework Core
- Supported the configuration and maintenance of network infrastructure, switches, and servers.
- Assisted users with computer setup and technical problem resolution.
- Used Git and GitHub for version control

Projects

Restaurant Management Dec 2025 – present

Developing a full-stack restaurant management system aimed at streamlining daily restaurant operations.

- Centralized management of orders, menus, and users
- Improved organization of daily restaurant operations
- Enabled efficient menu updates and control
- Supported role-based user access
- Designed for scalability and real-world use

Dengue Data Cube for Decision Making Jan 2025 – June 2025

Data analysis project focused on supporting decision-making through a data cube built from dengue case records in 2024.

- Integrated and structured dengue case data for analytical use

- Built a data cube to enable multidimensional analysis
- Supported data-driven decision making for public health insights
- Generated analytical views to identify trends and patterns

Scaffolding System Project

July 2024 – July 2025

Software project focused on accelerating application development through automated scaffolding generation.

- Generated base structures for new entities using predefined templates
- Automated the creation of front-end and back-end modules
- Standardized entity integration across the application
- Reduced development time when adding new system features

Skills

Programming Languages: C#, JavaScript, SQL, Python (basic), TypeScript

Backend: ASP.NET Core, REST APIs, Entity Framework Core

Databases: SQL Server, relational database modeling

Frontend: HTML, CSS, JavaScript, React, Bootstrap, TypeScript

Tools: Git, GitHub, Visual Studio, Postman

Software Engineering: Clean Architecture, layered design, basic SOLID principles

Soft Skills: Problem-solving and analytical thinking, Teamwork and collaboration in project-based environments, Adaptability and continuous learning and Time management and task prioritization

Languages

Spanish: Native

English: Intermediate (technical reading and documentation)

Extracurricular Activities

- Completed professional residency project focused on real-world software needs
- Continuous self-learning through documentation and practice projects
- Interest in frontend architecture and system design
